

About DePuy Synthes - A History of Leading the Industry Through Innovation

DePuy Synthes provides one of the most comprehensive portfolios of orthopaedic solutions in the world with specialties including joint reconstruction, trauma, craniomaxillofacial, spinal surgery, and sports medicine. Founded in 1895, DePuy Synthes was the first commercial orthopaedics company in the United States. DePuy Synthes continues to advance the art and science of hip and knee replacements by helping orthopaedic surgeons improve mobility for millions of patients around the world.

Personalized Solutions

TRUMATCH Personalized Solutions is the result of extensive research and development efforts at DePuy Synthes. TRUMATCH Personalized Solutions uses advancements in technology to provide surgeons with Personalized Solutions through customized instrumentation. These instruments are designed to help the surgeon obtain a precise fit of the implant. The implant helps reduce a patient's pain and restore their mobility.

If you are considering a knee replacement, ask your surgeon about solutions tailored specifically to *your* knee.

Please refer to the instructions for use for a complete list of indications, contraindications, warnings, and precautions.

PERSONALIZED SOLUTIONS

Personalized Knee Replacement Solutions

Your Knee is Unique

If it seems like you've tried everything and still don't have relief from your knee pain, it may be time to consider knee replacement surgery. It's important to remember that, like you, your knee is unique. The same solution may not necessarily be right for everyone. But now there are TRUMATCH® Personalized Solutions Instruments designed specifically for your anatomy.

TRUMATCH Personalized Solutions

TRUMATCH Personalized Solutions, available only with the ATTUNE® Knee System and the SIGMA® Knee System, uses a CT derived three-dimensional computerized scan of your leg to create customized surgical guides that are designed to deliver a Personalized Solution based on your unique anatomy. DePuy Synthes developed TRUMATCH Personalized Solutions to help your surgeon achieve consistency in the placement and positioning of your knee replacement.

The Positioning & Placement of Your Knee Replacement is Important

If you don't get an alignment on your car after putting on new tires, you'll eventually see uneven wear and tear, possibly even tire failure. The same idea applies to your knee replacement. Positioning and placement play an important role in the success of your implant as well.

Important Safety Information

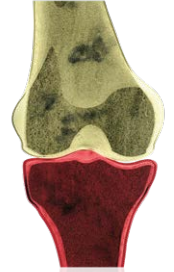

Keep in mind that the way a knee replacement will perform depends on your age, weight, activity level and other factors. There are potential risks, and recovery takes time. If you have conditions that limit rehabilitation, you should not have this surgery. Only an orthopaedic surgeon can tell you if knee replacement is right for you.

How Does TRUMATCH Personalized Solutions Work?

DePuy Synthes uses state-of-the-art software along with a CT scan to create a virtual 3-D model that shows the structure of your knee and the progression of your arthritis. DePuy Synthes then works with your surgeon to develop customized instrumentation:

Step 1

A CT scan is taken of your leg at your local hospital or image center.

Step 2

The image is sent to DePuy Synthes where a special team works with your surgeon to develop a 3-D model of your knee.

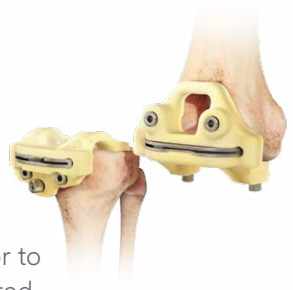

Step 3

The structure of your knee is analyzed and your personalized guides are created.

Step 4

Your guides are delivered to your surgeon to help position and place your new knee implant.

The guides are removed prior to your new knee being implanted.
